

Naming rules in JavaScript :

1. Names can contain letters
2. Names can contain digits, but not at beginning
3. Names can contain and also start with `_` and `$`
4. Spaces are NOT allowed. (Use camelcase / Pascalcase)
5. JavaScript is case-sensitive.
6. Reserved Keywords cannot be used as names.

High level	Low-level
High abstraction, closer to human language.	Low abstraction, closer to machine code
Easier to learn & use	More complex & harder to learn
Highly portable across diff. systems	Less portable, often system specific
Slow execution	Faster execution
<u>ex:</u> Python, Java C++, JS	<u>ex:</u> AL, MC

Compiler	Interpretes
Scans the entire program in one go	Program is interpreted / translated on line at a time
Converts the source code into object code	Do not convert the source code into object code.
Larger in size	Smaller in size
More efficient	Less efficient
<u>ex:</u> C, C++, C# etc	<u>ex:</u> Python, MATLAB, Ruby, Perl etc
